

**Supplemental Figure 1.** Assessment of biofilm production of MSSA rus276 in subinhibitory concentrations of ETP, CZ, or both drugs. Results are expressed as ratio of crystal violet absorbance (OD<sub>570</sub>) to bacterial density (OD<sub>600</sub>) to adjust for growth differences in the different conditions (\*p<0.05 vs control).

**Supplemental Figure 2.** Relationship between zone size by disk diffusion and broth microdilution of MSSA isolates in this study.
